EXPERIENCE

Federal Reserve Board

Washington DC

PRINCIPAL ECONOMIST

September 2022 - present

- Lead the economic analysis of bank mergers and divestitures, including the high-profile Capital One / Discover merger (joint Board and DOJ investigation).

Federal Trade Commission

Washington DC

ECONOMIST

June 2019 - September 2022

- Collaborated with attorneys to model and quantify competitive effects in merger investigations, including vertical integration in the NVIDIA / ARM semiconductor merger (FTC challenge).
- Investigated consumer harm from deceptive marketing practices, analyzing hidden lease terms and negative product review suppression.

Antitrust Division, U.S. Department of Justice

Washington DC

ECONOMIST

September 2007 - May 2019

- Served as the lead or key economist on major merger investigations and litigations, including Anthem / Cigna (health insurance), American Airlines / US Airways (airlines), National CineMedia / Screenvision (cinema advertising), Twin America ('hop-on, hop-off' tour buses), Standard Parking / Central Parking (parking facilities), and radio station advertising mergers.
- Modeled market-wide pricing and welfare impacts of trade tariffs and import quotas proposed by the administration.
- Authored core code and mathematical frameworks (in R and Stata) for horizontal merger, tariff, and quota simulations used standardly in Antitrust Division investigations.
- Designed and coded interactive web interfaces for merger and tariff simulation tools.
- Designed and maintained massive databases (exceeding 10 TB) to support complex antitrust investigations and federal court litigation.

R SOFTWARE PACKAGES

ANTITRUST

- A collection of tools for antitrust practitioners, including merger simulation models, market definition, and equilibrium pricing. Calibrates demand parameters and simulates mergers under various differentiated products demand systems including logit, nested logit, ces, and aids.

TRADE

- A collection of tools for trade policy analysis. Provides trade policy practitioners with a tractable framework for simulating the effects of tariffs, quotas, and other trade policy measures on market outcomes.

COMPETITIONTOOLBOX

- A graphical user interface for the antitrust and trade R packages. Provides an interactive interface for conducting merger simulations, market definition analysis, and trade policy analysis without requiring R programming knowledge.

SERVICE

US DOJ/KFTC KNOWLEDGE EXCHANGE PROGRAM

2018

- Organized, co-authored and co-taught a 3 day training program for new economists at the Korean Free Trade Commission (KFTC). The purpose of this program was to train KFTC economists in how to analyze horizontal mergers.

ALGORITHMIC DOCUMENT REVIEW

2017

- Trained a series of machine learning classifiers to predict if a document is pertinent to an investigation. Once these models have been fully tested, they will greatly reduce the time needed to review the massive amount of documents received by the Antitrust Division.

R TRAINING

2012 - present

- Authored and co-taught a series of short courses for Economists and Research Analysts on R. Covered topics included: data analysis, plotting, regression analysis, mapping, interfacing with databases, and antitrust analysis.
